

INCREASING REVENUE FOR BEHAVIORAL HEALTH PROVIDERS

- ❖ Evidence-based outcomes
- ❖ Patient Engagement
- ❖ Simplicity

*A transformative mindset to Mental Health treatment with value opportunities for Payers & Providers*

## OUTCOME MONITORING & MEASURING

### IMPROVE THE QUALITY OF CARE WHILE TREATING MORE PATIENTS AND INCREASING CLINIC REVENUE

**FARO10 is an outcome management and patient engagement tool that allows clinicians to provide treatment using a measurement-based approach, while also providing opportunity to increase Clinic revenue.**

**The software introduces automation in service areas such as computer-based assessments, documentation, health reporting and collaborative treatment, which reduces time spent “running the business” and leaving more time available to see patients.**

### Revenue Benefits for Providers

- Administer computer-based exercises and assessments which can be completed by patients outside of the Clinic. This is a reimbursable activity by most major insurance providers.
- Faro automates the recording of symptom changes and patient health measures needed for authorizations, reimbursements and audits.
- *Treat more patients:* With simple reports that summarize patient status, and spending less time “running the business”, Clinicians have more time available to see patients.
- All assessments and exercises completed by the patient or assigned by the Clinician are automatically archived and easily retrievable.
- Digitally signed and recorded patient forms such as Consent, Liability, and Privacy policies.
- Faro records important information regarding the treatment provided and the Patients adherence to treatment (Did patient take prescribed medication? Did the patient complete exercises assigned by Clinician? Were patient and/or observers’ actively and accurately updating Clinician regarding symptom and health progress?).
