

SOLUTIONS FOR BEHAVIORAL HEALTH PROVIDERS

SUBSTANCE ABUSE TREATMENT

IMPROVE THE QUALITY OF CARE
BY MEASURING OUTCOMES
AND COORDINATING CARE

FARO10 is a patient-centered outcome management tool that allows clinicians to provide better treatment using a measurement-based approach. In behavioral health, rigorous measurement of value (outcomes and cost) is perhaps the single most important step to progress.

Faro10 evaluates the state of client health both in terms of patient functioning and in terms of categories of symptom severity related to the client's clinical problem. The software uses real-time data collection from client, observers, social media and treatment team to create and measure quality metrics. These measures evaluate the actual results of care and can also be used to establish internal benchmarks, coordinate care, and for quality improvement.

Empowering Patients:

Faro10 helps to introduce patient engagement initiatives which can lead to reductions in hospital visits, improvements in treatment adherence and quality of life. Treatment adherence is one of the key factors for achieving optimal clinical outcomes. Faro10 empowers patients to participate in wellness tracking and reporting, which helps improve the Patient/Clinician connection and build trust. Substance abuse populations also have increased rates of people-pleasing. On the application there is potential for clients to be more open and honest. Clients sometimes do not want to disappoint their therapist and it could be easier in the application to be vulnerable and forthright. Sessions become more productive when treatment can begin immediately and Clinicians can ask the right questions.

Quality Measurement:

The Faro10 application tracks patient health in real-time and introduces quality metrics that measure outcomes, and not easy-to-measure process compliance indicators (as is often the case) that do not reflect the reality of patient wellness or progress. Faro10 is unique in its approach by also combining real-time OBSERVER reporting, social media insights and wearable technology tracking into the quality measurements, which provides a holistic view of the patient and reduces the time to diagnose.

*Faro10 helps providers meet the new Care, Treatment, Services standards (CTS)
CTS.03.01.09 issued by the Joint Commission
which took effect on January 1, 2018.*

Outcome measures include:

- MEASURE #1:** Reduction in frequency of cravings
- MEASURE #2:** Reduction in intensity of cravings
- MEASURE #3:** Improvement in mood identified by reduction of frequency of periods of despondency
- MEASURE #4:** Improvement in mood identified by reduction in severity of periods of despondency
- MEASURE #5:** Days of abstinence
- MEASURE #6:** Thoughts of use
- MEASURE #7:** Shame
- MEASURE #8:** Actual use
